

# UK TRAIN RIDES

Analysis – SQL CASE STUDY

CREATED BY – RANA BASAK

# INTRODUCTION

Mock train ticket data for National Rail in the UK, from Jan to Apr 2024, including details on the type of ticket, the date & time for each journey, the departure & arrival stations, the ticket price, and more.

# OBJECTIVES

1. What are the most popular routes?
2. What are the peak travel times?
3. How does revenue vary by ticket types and classes?
4. What is the on-time performance?
5. What are the main contributing factors?

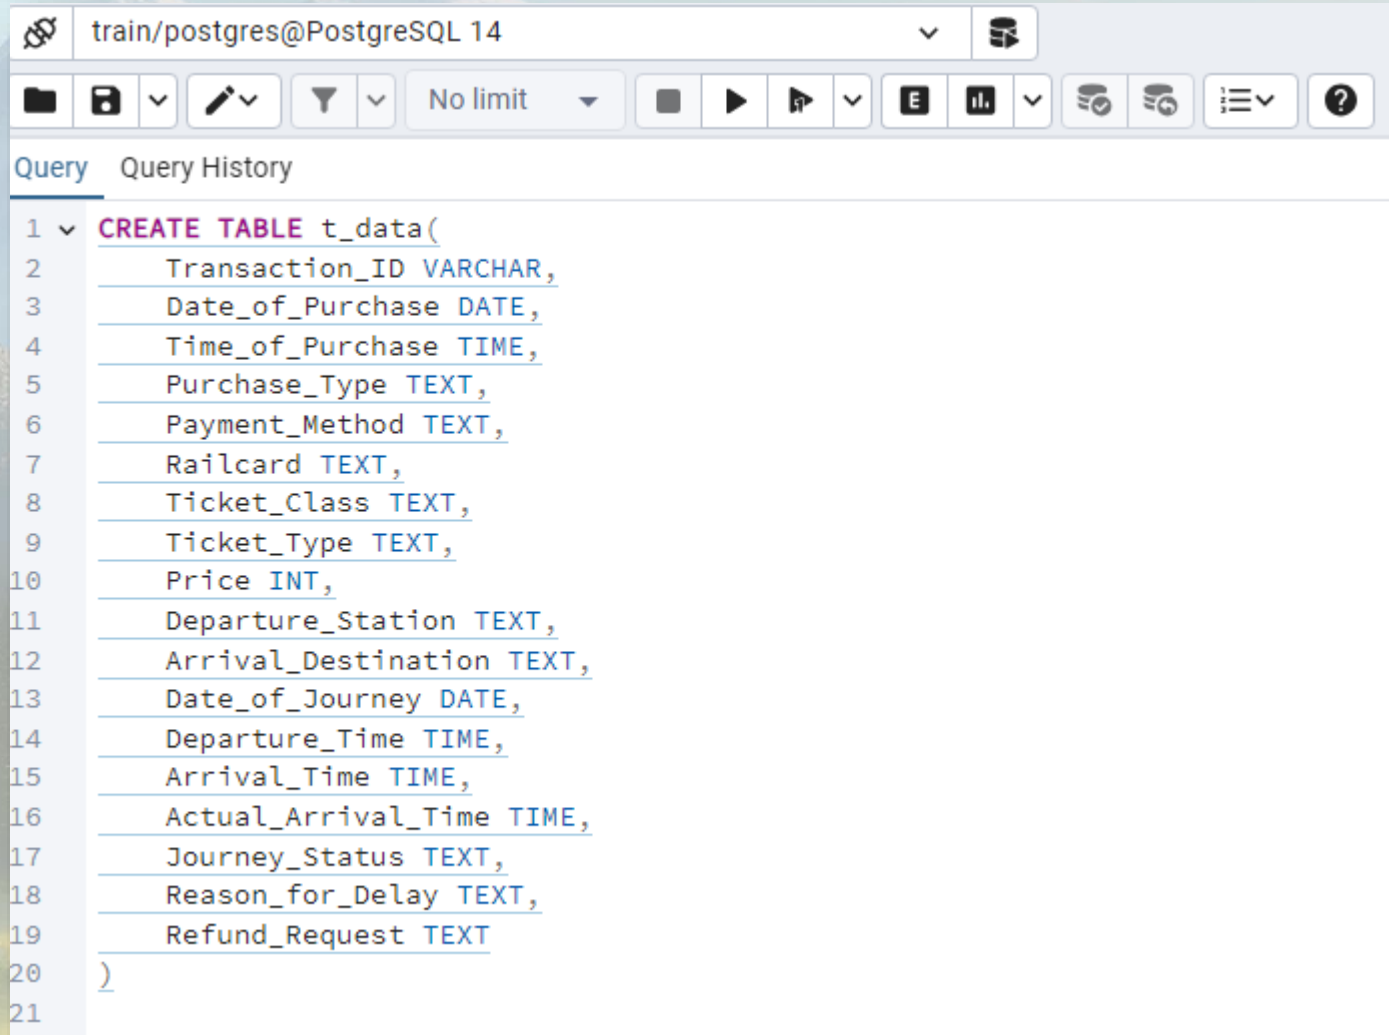

# DATASET

- Transaction ID
- Date of Purchase
- Time of Purchase
- Purchase Type
- Payment Method
- Railcard
- Ticket Class
- Ticket Type
- Price
- Departure Station
- Arrival Destination
- Date of Journey
- Departure Time
- Arrival Time
- Actual Arrival Time
- Journey Status
- Reason for Delay
- Refund Request

# CREATE TABLE IN SQL DATABASE

The screenshot shows a PostgreSQL SQL client window titled 'train/postgres@PostgreSQL 14'. The window has a toolbar with icons for file operations, query execution, and settings. Below the toolbar, there are tabs for 'Query' and 'Query History'. The 'Query' tab is active, displaying a SQL statement to create a table named 't\_data'. The statement is as follows:

```
1 CREATE TABLE t_data(  
2     Transaction_ID VARCHAR,  
3     Date_of_Purchase DATE,  
4     Time_of_Purchase TIME,  
5     Purchase_Type TEXT,  
6     Payment_Method TEXT,  
7     Railcard TEXT,  
8     Ticket_Class TEXT,  
9     Ticket_Type TEXT,  
10    Price INT,  
11    Departure_Station TEXT,  
12    Arrival_Destination TEXT,  
13    Date_of_Journey DATE,  
14    Departure_Time TIME,  
15    Arrival_Time TIME,  
16    Actual_Arrival_Time TIME,  
17    Journey_Status TEXT,  
18    Reason_for_Delay TEXT,  
19    Refund_Request TEXT  
20 )  
21
```

# Q1 What are the most popular routes?

```
Query Query History
1 WITH NEW_D AS (
2     SELECT transaction_id, CONCAT(departure_station, ' to ', arrival_destination) as routes
3     FROM t_data)
4
5 select routes ,
6     rank () over (order by count(routes)) as ranking ,
7     count(transaction_id)
8 from NEW_D
9 GROUP BY routes
10 order by ranking desc
11 limit 5
```

## Output

	routes	ranking	count
	text	bigint	bigint
1	Manchester Piccadilly to Liverpool Lime Street	65	4628
2	London Euston to Birmingham New Street	64	4209
3	London Kings Cross to York	63	3922
4	London Paddington to Reading	62	3873
5	London St Pancras to Birmingham New Street	61	3471

## Q2 What are the peak travel times?

```
Query Query History
1 with nt as (
2     select extract(hour from (departure_time)) as hours
3     from t_data
4 )
5     select hours,
6     rank() over(order by count(hours)) as ranking
7 from nt
8 group by hours
9 order by ranking desc
10 limit 5
```

### Output

Data Output Messages Notifications			
	hours numeric	ranking bigint	
1	18	24	
2	6	23	
3	17	22	
4	7	21	
5	16	20	

# Q3 How does revenue vary by ticket type and class?

```
Query Query History
1 select ticket_class,ticket_type , sum(price) as revenue
2 from t_data
3 group by ticket_class,ticket_type
4 order by revenue desc
```

## Output

	ticket_class text	ticket_type text	revenue bigint
1	Standard	Advance	242388
2	Standard	Off-Peak	178666
3	Standard	Anytime	171468
4	First Class	Advance	66886
5	First Class	Off-Peak	44672
6	First Class	Anytime	37841

# Q4 What is the on time performance?

```
Query Query History
1 SELECT journey_status, count(journey_status) as total
2 from t_data
3 group by journey_status
4 order by total desc
```

## Output

	journey_status text	total bigint
1	On Time	27481
2	Delayed	2292
3	Cancelled	1880

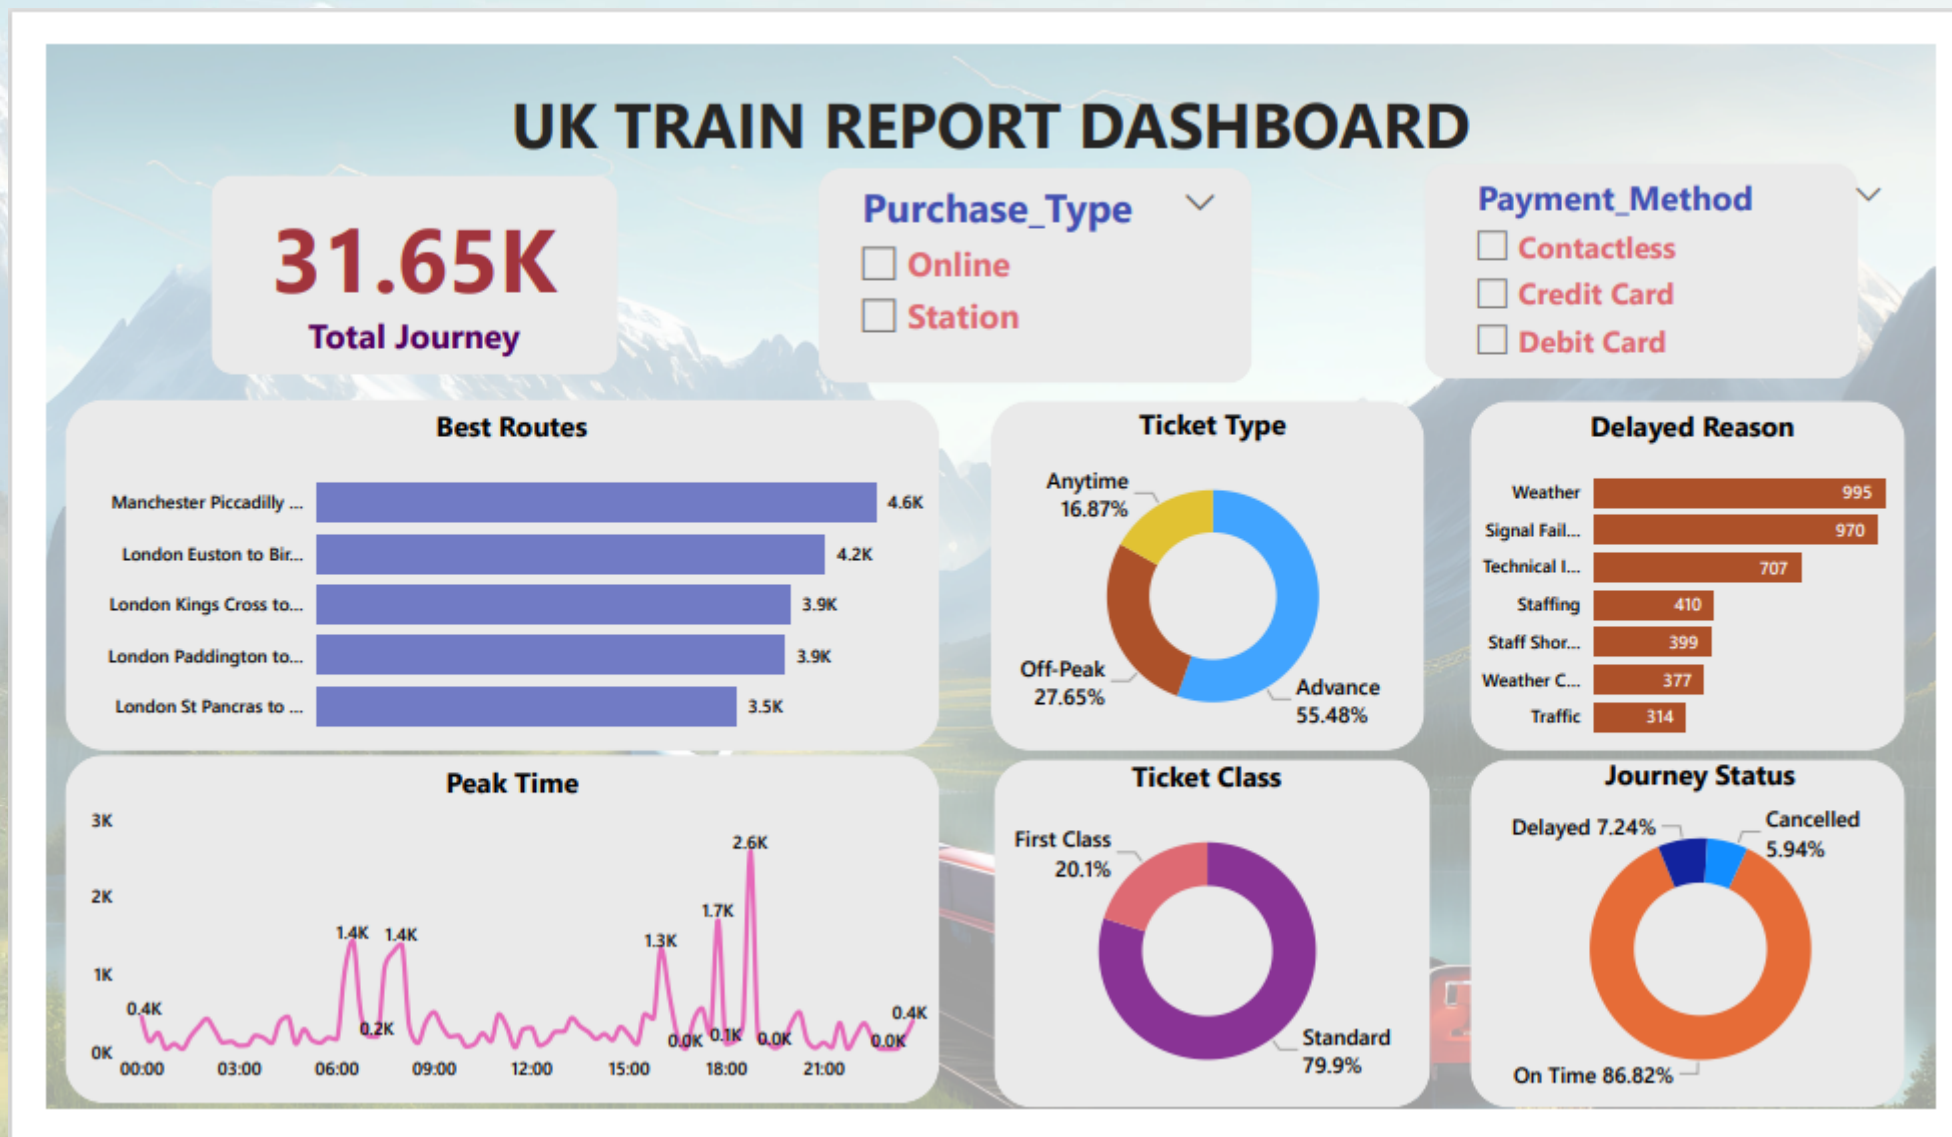

# Q5 What are the main contributing factors?

```
Query Query History
1 select reason_for_delay, count(reason_for_delay) as number_of_delay
2 from t_data
3 group by reason_for_delay
4 order by number_of_delay desc
5 limit 5
```

## Output

	reason_for_delay	number_of_delay
	text	bigint
1	Weather	995
2	Technical Issue	707
3	Signal Failure	523
4	Signal failure	447
5	Staffing	410

# Dashboard

# Insights

- Most popular route used by people is "Manchester Piccadilly to Liverpool Lime Street"
- Peak travel time in UK is between "6 am to 8 am" and "4 pm to 7 pm"
- Most revenue generated from "Standard class"
- On time performance of UK trains is 86%
- Maximum delayed reason is bad weather condition

# **SOFTWARE USES**

- PostgreSQL
- Power BI
